■ What Is Prescaling?

Prescaling converts the count value to any numeric value.

To display $\square\square\square\square.\square$ mm in a system that outputs 250 pulses for a 0.5-m feed,

the length per pulse = $500 \text{ mm } (0.5 \text{ m}) \div 250 = 2$.

1. The prescale value for the K3HB-C is set using the mantissa X \times exponent Y, so the prescale value = 2.0000×10^0 ,
X = 2.000, and Y = 00.
2. Next, set the decimal point position for one digit to the right of the decimal point: $\square\square\square\square.\square$

Derating Curve for Sensor Power Supply (Reference Values)

For 12V

Note: 1. The above values were obtained under test conditions with the standard mounting. The derating curve will vary with the mounting conditions, so be sure to adjust accordingly.

2. Internal components may be deteriorated or damaged. Do not use the Digital Indicator outside of the derating range (i.e., do not use it in the area labeled ①, above).

Internal Block Diagram

BCD Output Timing Chart

A REQUEST signal from a Programmable Controller or other external device is required to read BCD data.

Single Sampling Data Output

The data is set in approximately 30 ms from the rising edge of the REQUEST signal and the DATA VALID signal is output. When reading the data from a Programmable Controller, start reading the data when the DATA VALID signal turns ON. The DATA VALID signal will turn OFF 40 ms later, and the data will turn OFF 16 ms after that.

- The K3HB BCD output model has an open collector output, so wired OR connection is possible

Continuous Data Output

Measurement data is output every 64 ms while the REQUEST signal remains ON.

Note: If HOLD is executed when switching between data 1 and data 2, either data 1 or data 2 is output depending on the timing of the hold signal. The data will not go LOW.

Programmable Controller Connection Example

Display Unit Connection Example

Note: The BCD output connector pin number is the D-sub connector pin number when the BCD Output Cable (sold separately) is connected. This number differs from the pin number for the Digital Indicator narrow pitch connector (manufactured by Honda Tsushin Kogyo Co., Ltd.).

Refer to the following User's Manual for application precautions and other information required when using the Digital Indicator:
 K3HB-R/P/C Digital Indicator User's Manual (Cat. No. N136)
